(54) Title: METHOD FOR STORING VIDEO SIGNALS

(57) Abstract: In a method for storing video signals with the aid of a random access memory (SDRAM) (1) that is operated synchronously during writing and reading, there being connected downstream of the random access memory (1) a further memory (FIFO) (4) with different frequencies for writing and reading, the video signals to be stored are divided into a plurality of parallel data streams (3). The data streams are time-compressed (31) in such a way that the compressed data streams take up only a part of a predetermined write-read cycle for the random access memory (1). Data streams read from the random access memory (1) are conducted via the further memory (4) and combined (5) to form video signals.

PCT/EP 02/14711

**A. CLASSIFICATION OF SUBJECT MATTER**  
 IPC 7 H04N9/896

According to International Patent Classification (IPC) or to both national classification and IPC

**B. FIELDS SEARCHED**

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 H04N

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

## \* Special categories of cited documents :

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the international filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the international filing date but later than the priority date claimed

- \*T\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- \*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- \*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- \*&\* document member of the same patent family
